Airborne allergens

Children and young people may respond to airborne allergens by sneezing or scratching, coughing, having itchy eyes or a runny nose, and their eczema may flare.

Common airborne allergens include:

- pollens from grasses, trees, and weeds
- animal saliva, hair, and dander
- droppings from cockroaches and house dust mites
- mold and mildew spores.

Airborne allergens are not often triggers for anaphylaxis.

Limit exposure

Exposure to allergens can vary by time, location, and type of room within a building.

- ✓ Find out if pets and their habitats, such as straw and hay, are potential allergen triggers.
- ✓ Use air conditioners and keep windows and doors closed during windy days and high pollen seasons.
- ✓ If possible, refrain from outside activities during times of high pollen counts – [Annual pollen calendar, Allergy New Zealand](#).
- ✓ Avoid walking in areas with long grass on trips and excursions.
- ✓ Wash bedding used in early childhood centres and medical rooms in hot water weekly.
- ✓ Wash toys and dress-ups regularly to eliminate dust.
- ✓ Wipe down window sills and areas where dust gathers.
- ✓ Plan to clean carpets throughout the year.
- ✓ Keep areas free of leftover food and drink as this can encourage cockroaches and small rodents.
- ✓ Wipe all surfaces after food preparation and eating.
