# The NZ Curriculum

The cause and effects of FASD are an important part of alcohol and other drug (AoD) education. This sits primarily in the health and physical education learning area of the NZC. As a context for learning it also has relevance for the social sciences, English, and science.

Plan authentic learning experiences that are relevant to situations your students will face. Have students consider:

- the messages they receive about alcohol through the media (advertising, film, social media), and to critically analyse how they affect their choices
- FASD, its cause, and its effects on children and families
- the role of alcohol in different cultures and situations
- the effects of alcohol on their decisions and actions.
