information

#### Understand the recognition network

An introduction to how we perceive and make sense of information in different ways.

### Implications of variability

When we present information in only one way, we create barriers for students and limit learning opportunities.

No single medium works for every learner, nor does it for every subject....To promote understanding of information, concepts, relationships, and ideas, it is critical to provide multiple ways for learners to approach them.

## Guidelines to help us plan for variability

From the neuroscience, we know that variability across the recognition networks is predictable.

The three representation guidelines help us ensure all learners are able to access information and build new understandings.

Guidelines	Purpose
Provide options for perception	Interact with flexible content that doesn't depend on a single sense like sight, hearing, movement, or touch
Provide options for language and symbols	Communicate through languages that create a shared understanding
Provide options for comprehension	Construct meaning and generate new understandings

#### **Potential barriers**

The presentation of information can impact access, participation, and engagement.

Potential barriers for students could be:

- ✓ decoding text
- ✓ information presented in one format
- ✓ materials that are unable to be adjusted, personalised, or customised for learner preference
- ✓ unfamiliar vocabulary
- ✓ text not in first language
- ✓ unfamiliar or complicated language
- ✓ unfamiliar symbols and new concepts
- ✓ little background knowledge to build upon
- ✓ low vision
- ✓ physically accessing materials, for example, turning pages, navigating digital content
- ✓ delivery method for example whole class, small group.

#### **Summary**

#### Representation

Flexible information and content that can be personalised.

Supporting understanding and decoding.

Activate background knowledge and support critical thinking.
